

F-Secure Anti-Virus Corporate Suite

F-Secure® Anti-Virus™ Corporate Suite combines all the critical components for protecting corporate networks against various malware threats, including viruses, worms and other malicious code, as well as hackers and unauthorized intrusion attempts. F-Secure Anti-Virus Corporate Suite protects workstations, servers, gateways, and e-mail servers, all of which can be centrally managed from a single location.

Protection for Laptops and Desktops

F-Secure Anti-Virus Corporate Suite protects corporate laptops and desktops against viruses, spyware, hackers, network worms and zero-day threats. Using centralized management network administrator can also control the use of networking applications, such as peer to peer software and network games.

- > F-Secure Anti-Virus™ for Workstations

Protection for File Services

F-Secure Anti-Virus Corporate Suite ensures that users who connect to corporate Windows or Linux file servers with infected machines do not spread viruses further into the network. For Linux servers the Suite provides an additional protective layer complete with integrated firewall to prevent attacks from the network.

- > F-Secure Linux Server Security™
- > F-Secure Anti-Virus™ for Citrix Servers

Protection for E-mail and Internet Gateways

F-Secure Anti-Virus Corporate Suite safeguards corporate e-mail (SMTP) and web traffic (HTTP and FTP over HTTP) by removing malicious content. The Suite stops viruses entering not only from the Internet, but also between remote offices and from internal e-mail traffic. The optional F-Secure Spam Control also filters annoying spam messages.

Key Features

End-to-end antivirus protection for laptops, desktops, file servers, e-mail servers and gateways.

Detects and removes spyware from laptops and desktop computers.

Total protection against viruses, worms and Trojans attacking via e-mail, web, floppy disks or CD-ROM, as well as against hackers and malware on the Internet.

Integration with F-Secure Policy Manager™ for easy configuration, enforcement and monitoring of security policies at every tier of the corporate network from a single console.

Automatic daily virus and spyware definition database updates with minimal bandwidth use that ensures always up-to-date protection.

F-Secure's powerful virus scanning engines, firewall software and content filtering ensure that the network is proactively protected even against unknown threats.

Virus research teams working 24/7 ensure short reaction times and fast turnarounds against new and emerging threats.

A comprehensive and cost-efficient solution that provides everything necessary to secure the corporate network.

Proactive Protection against Unknown Threats

In addition to known viruses, the antivirus products recognize new, unknown threats based on advanced proactive protection. The integrated desktop firewall prevents unauthorized access to the workstations and hides them from hackers and network worms by constantly monitoring and filtering Internet traffic. The unique network quarantine functionality ensures the appropriate protection level of workstations and laptops connecting to the company network before granting them access.

Extensive Centralized Management

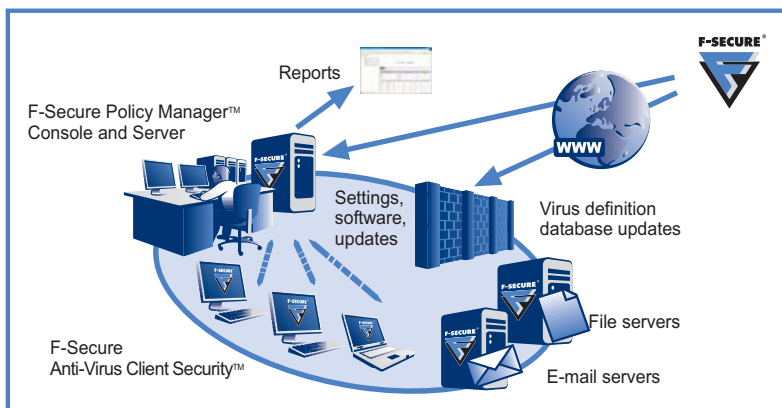

With F-Secure Policy Manager, included in F-Secure Anti-Virus Corporate Suite licenses, software can be centrally installed, configured and updated from a single console. In addition to this, the administrator can also easily keep track of the network by generating extensive reports on its security status.

Automatic Virus and Spyware Definition Updates

Automatic antivirus updates improve data security through added reliability and prompt delivery of critical signature files. The virus definition databases are updated automatically on a daily basis to ensure 100% effectiveness without administrator intervention.

F-Secure Data Security Lab

Antivirus products are only as good as the research and dedication behind them. That is why F-Secure Anti-Virus is consistently ranked at the top when compared with competing products. A dedicated team of researchers working 24 hours a day ensures that reaction time to emerging threats is immediate and that a cure can be distributed fast. In fact, F-Secure is one of the few companies that releases tested virus definition updates daily to make sure customers are receiving the highest quality service and protection.

Platforms

- F-Secure Policy Manager
- F-Secure Policy Manager Console
- F-Secure Policy Manager Server
- F-Secure Policy Manager Web Reporting
