

LET'S GET STRAIGHT TO THE POINT.

SYMANTEC™ MULTI-TIER PROTECTION (SMP)

Symantec Multi-tier Protection safeguards business digital assets and lowers risk by providing unmatched protection against threats for laptops, desktops, mobile devices, mail servers and SMTP gateways. It includes Symantec™ Endpoint Protection and Symantec™ Mail Security for groupware and the SMTP gateway, stopping spam and viruses while reducing security risks.

➔ PRODUCT DESCRIPTION

Symantec Multi-tier Protection 11 is a product bundle and is not a single integrated product. The following Symantec products are tied together in a single package called Symantec Multi-tier Protection 11.

- **Symantec™ Endpoint Protection**
Advanced antivirus protection for Microsoft® operating systems
- **Symantec AntiVirus™ for Macintosh®**
Antivirus protection for MacOS
- **Symantec AntiVirus™ for Linux®**
Antivirus protection for Linux clients
- **Symantec AntiVirus™ for Windows® Mobile**
Antivirus protection for Windows Mobile operating systems
- **Symantec™ Mail Security for IBM® Domino®**
Antivirus and antispam protection for Domino servers
- **Symantec™ Mail Security for Microsoft® Exchange servers**
Antivirus and antispam protection for Microsoft® Exchange gateway
- **Symantec Brightmail based Premium AntiSpam**
Premium antispam for Microsoft® Exchange and IBM® Domino® servers
- **SMS 8300 Software Subscription**
Antivirus/Antispam for SMTP gateway protection

Symantec Multi-tier Protection provides an effective solution for all businesses - including threat protection solutions for leading email solutions and mobile devices, as well as Windows®, Mac and Linux clients.

➔ PRODUCT CLAIM

For businesses that need a single, integrated solution to protect against sophisticated attacks that evade traditional security measures, Symantec Multi-tier Protection safeguards business digital assets and lowers risk by providing unmatched protection against threats for laptops, desktops, mobile devices, mail servers and SMTP gateways. Unlike many other competitive point products, it includes both endpoint and email protection to deliver superior protection against today's sophisticated threats.

SYMANTEC IS
**ENDPOINT
PROTECTION.**

→ PRODUCT PROPOSITION

Features	Benefits	Customer Appeal
Multi-layered Endpoint Protection	Seamlessly integrates industry leading protection technologies (antivirus, antispayware, desktop firewall, IPS and device control) in a single agent.	Protects desktop, laptop and server from viruses, spyware, worms, malware and zero-day attacks.
Antivirus for Mac & Linux	Symantec AntiVirus protection for Macintosh® and Linux®.	Protects heterogeneous environments.
Antivirus for Windows® Mobile	Symantec AntiVirus for Windows® Mobile enables secure mobile computing by providing comprehensive virus protection against malicious threats that target Mobile operating systems.	Extends protection to mobile devices and smartphones.
Antispam Technology	Brightmail based antispam technology catches over 97 percent of spam and less than one in a million false positives. Delivers automatic spam rule updates. Provides real-time analytics and reporting.	Reduces spam volume and keeps email secure.
Mail Server Protection	Symantec™ Mail Security helps provide highly effective mail protection against spam and viruses, and enforces company email security policies on MS Exchange and Domino® servers.	Secures MS Exchange and Domino® servers.
SMTP Gateway Protection	SMS 8300 protects against inbound and outbound email and instant messaging (IM)-borne threats.	Secures vulnerable email and messaging systems, more effectively control sensitive data, meet regulatory compliance mandates and corporate governance demands.

→ ENDPOINT PRODUCT PORTFOLIO

The Symantec™ Endpoint Protection (SEP) portfolio consists of:

- *SEP*: combines Symantec AntiVirus™ with advanced threat prevention, delivering an unmatched defence against viruses, worms, spyware, internet fraud and identity theft for laptop, desktops and servers.
- *SEP Multi-tier*: combines Symantec AntiVirus with advanced threat prevention, delivering an unmatched defence against malicious attacks for laptops, desktops and servers, as well as email systems and mobile devices.
- *SEP Multi-tier Small Business Edition*: for small businesses that use Microsoft® Exchange email server, includes threat prevention for laptops, desktops and servers plus mail security for MS Exchange.
- *Symantec™ Network Access Control (SNAC)*: securely controls laptops, desktops and servers access to corporate networks, enforces corporate security policy (for example, what antivirus software should be installed on corporate PCs?), whilst easily integrating with existing network infrastructures.

The Endpoint family also includes several products that add and extend functionality:

- *Symantec™ Critical System Protection*: protects against zero-day attacks, hardens systems and helps maintain compliance by enforcing security policies on laptops, desktops and servers.
- *Symantec™ Endpoint Encryption*: provides advanced encryption for desktops, laptops and removable storage devices.
- *Symantec™ Mobile Security*: combines award-winning antivirus, advanced firewall, antispam and data encryption technologies to secure Microsoft® Windows® Mobile and Symbian smartphones and PDAs.
